DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 3 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 3 is drawn to a computer program per se, and is not limited to a component of a computer comprising a program (see MPEP 2106, IV, B., 1).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 2 are indefinite because they recite a step or means for enumerating regions of identity, but then follow with a later step or means that removes sequences that are nearly identical. It is not clear if the sequences that are removed are that same sequences that are enumerated.

For the purpose of examination it has been assumed that the enumerated regions are the sequences that are removed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Parsons.

The claims are drawn to a method, and computer system therefor, of identifying sequences that are in a genomic sequence database that are nearly identical and removing the nearly identical sequences.

Parsons shows a program named ICAass. ICAass identifies sequences in a genomic sequence database that are nearly identical, as exemplified in page 607 and Figure 2. ICAass removes identified redundancies in a genomic sequence database by forming clusters of nearly identical sequences and then generates a compressed searching database in which in which redundancies are reduced (see discussion on page 603).
